Re: Removal of contaminated soil at (b) (6)
Leonard, Fannin County, Texas 75452

Gary,

Last year you approached me about removing the soil at my property and replacing it with sandy loam. You said that my property would be put back into it's original condition. I have a few things that need to be repaired or replaced to it's previous condition.

When adding new loose dirt it takes 10 years for it to reach 90% compaction.

Here are a few things that need to be taken care of, but not limited to only these.

1. sewer line is standing water, it is not flowing as a drain line is supposed to drain or it will eventually stop up causing raw sewer to overflow in to the yards of this property. It has already stopped up 2 times in the last 3 weeks.
2. There is about 10 places in the yards of these 2 houses that does not drain and causes puddles of water to stand.
3. The storage building that was moved in the back yard in leaning 2 directions and it is holding water under it.
4. The AC condensation drains are blocked to impede water to escape.
5. The yards are rough and irregular.
6. The street ditch in front of the houses does not drain properly.

I hope these things can be repaired asap, the sewer line being the item that needs immediate attention.

If any other things come up, I will let you know.

Yours Truly
